

Natural Antiseptics With No Toxins Heal Better

What do you think if someone says Antiseptics? I'm used to think that antiseptics is the solution to disinfect the skin or to prevent the infection. The applications of antiseptics don't limit on skin only. You can have soap with antiseptics, baby powder or powder for adults contains antiseptic properties and mouthwash or lozenges with antiseptics. The antiseptic are also used for mouth ulcers or gum inflammation treatment. These antiseptics are derived from chemicals which can cause more or less toxic on the surface and it has to be used sparingly. Most of commercial antiseptics are using ALCOHOL as the cheap ingredient.

The Advantages of Natural Antiseptics For Skin

Natural antiseptics for skin are derived from essential oils. Terpenes contained in essential oils has reasonably strong anti bacterial, antiviral and antifungal properties. It can be used for minor wound, insect bites, minor burns. The oil doesn't aggravate or cause thinning on skin. It is effective solvent to cleanse skin from the dirt. Few drops of this oil accidentally dripped onto the old wooden stool. Amazingly, the area in the wooden stool turned out to look like a new polished wooden area. The oil penetrates deeply into the skin layer to heal and soothe the source of the wound/burns/bites. Apart from healing, the oil also seals the wound leaving no scars, nourishes and moisturizes the skin.

The Advantages of Natural Mouth Wash or Rinse

Natural Mouth Wash use natural ingredients such as tea tree oil, propolis honey which act as antiseptics to provide you a relief from sorethroat and to keep a healthier mouth.

The Advantages of Natural Lozenge

Natural Lozenge use natural ingredients such as essential oils which contains terpenes, honey, lemon as antiseptics.

If you are parents with young kids, you're assured that natural antiseptics contain NO ALCOHOL.
